

## Ethernet in the First Mile

### 1 Customer site

Either a Dual or Quad service is installed into the building. The speeds delivered are symmetrical i.e. the same downstream and upstream. There is an option of a managed router if required.

### 2 Exchange connection

An EFM card is installed by TalkTalk Business into the MSAN at the exchange. The lead time is reduced if the EFM card is already present.

### 3 Connect to the network

The exchange is connected to our NGN allowing you to choose the circuit to be delivered either as an Internet Access circuit or as part of an MPLS IPVPN solution.
